- Partially met / Partiellement atteint : ... %
- Not achieved / Pas atteint

AREA / ZONE: Worldwide

2 March 2015

1- OBSERVATION / CONTEXT

- Reminder: Given the dangerous nature of the products handled in numerous pharmaceutical and virology laboratories, many Raven units have been permanently assigned.

2- OBJECTIVES

- Closely monitor the activities of these laboratories and report any information relating to dangerous identified elements.
- Implement a strategy to help the takeover of these laboratories.

3- ACTIONS

- Given the risks of the action required and its potentially dangerous nature, the Raven teams had to strictly follow the procedures.
 - **High level of carefulness is strictly required.**
 - The trained units are allowed to take radical measures under the conditions written in the intervention protocols.
 - If by any circumstances, the security systems are enforced, the possibilities to get information will be greatly compromised, therefore, the mission will be aborted.
 - If a Raven unit member is identified as an intruder:
 - Any contact possibility with the Head Quarter will be automatically & immediately cut, as well as with all other Raven units.
 - Due to the sensitivity of the operation, we cannot afford to compromise our positions.

4- RESULTS

- May 2014, a Raven unit found out the existence of a large-scale project within 5 years, intending to implement particularly impactful liberticidal measures, legitimised by a context requiring extremely strict security measures, thus forcing public acceptance.
 - The aim of the project, discovered by the Raven unit, is to considerably strengthen population control by radically restricting individual and collective freedoms.
 - Lobbying in government structures are planned in order to take action at legislative & executive levels.
 - Forcing public acceptance with arguments that cannot be validly contested.
 - Marginalisation of any attempt to contest and exclusion of dissenters by the population itself.
 - Choice of context: pandemic, named COVID 19, launched by a virus created in laboratory under the name "SARS-CoV-2" [see report B7890_IRRA001_UNRE].

2 March 2015

- The BNT162-bXXX vaccines previously produced have been classified as BIOLOGICAL HAZARD CLASS 6 by our Raven units.
- Roll-out of BNT162-bXXX vaccines for distribution to global vaccination centres planned for December 2020.
- Vaccines storage at 3 separate production sites in countries as far apart as possible. Storage is equipped with a "redundancy" system to compensate for any failure in one of the sites.
- Jun 2014, Project credibility and feasibility assessed at 93%. Major risk of damaging specific populations up to 25%.
 - Red alert activated, [see report B7890_IRRA002_INTI]
- Jul 2014, in accordance with report B7890_IRRA003_PLST: implementation of enhanced surveillance unit for 3 months:
 - Deployment of listening devices at 14 strategic points.
 - 72 Raven units have been assigned to the operation in 12 different countries.
- Nov 2014 - CONFIDENTIALITY REPORT LEVEL 5 B7890_IRRA004_UNRE:
 - Evidence obtained about the project's scope: the entire world population is targeted.
 - Research: 6 countries selected for research work on the design of the virus from stem cells in accordance with the specifications referenced CD-B7890-[YMG837-yXXX] and development of the virus inoculation plan enabling a global pandemic to be declared in 60 days maximum.
 - Production: the pharmaceutical industry is providing 15 production units, 3 of them are operational 24/7 and 12 of them are back-up.
- Feb 2015 – FINAL VALIDATION OF THE STRATEGIC PLAN B7890_IRRA005_PLST
