RESULT / RESULTAT

- Achieved / Atteint
- Partially met / Partiellement atteint : ... %
- Not Achieved/ Pas atteint

AREA / ZONE : Worldwide

27 December 2018

1- OBSERVATION / CONTEXT

- Air poisoning problems via aerial spraying, more commonly called “chemtrails”, have been known for a long time but have never been solved.
- Areas concerned:
 - Research and development in biochemistry
 - Chemical industry
 - Aeronautics

2- OBJECTIVES

- Discover all the molecules used in “chemtrails” and their effects.
- Place chemical mass production factories under surveillance.
- Obtain information on complicit actors in the aeronautics sector.

3- ACTIONS

- 02/18: recruitment and training of Raven units for this mission (report 5U744_IRRA001_REFO).
- 05/18 à 12/18: deployment of Raven units in the areas listed in Part 1.
 - Infiltrate biochemistry research and development laboratories.
 - Closely monitor their activities and report any information regarding the molecules developed there.
 - Infiltrate chemical mass production factories.
 - Infiltrate airports and airfields.
 - Identify complicit actors and place them under reinforced observation.

4- RESULTS

- Our Raven units have discovered a vast and complex “chemical social hacking” network, built and consolidated over several decades.
 - Goal: increase population control.
 - Examples (but not limited to):
 - Generate a feeling of euphoria during an electoral campaign.
 - Artificially induce addictions.
 - Increase the aggressiveness of certain populations to legitimise repression and to favour the outbreak of conflicts.
 - This network extends well beyond chemtrails (air, water, food, dermatological products, pharmaceutical products, etc.).
 - Focus on chemtrails to divert the public attention from other diffusion vectors.
 - Industrial development started in the 1920s:
 - Initially for military purposes.
 - Gradually extended to the entire civil sphere after the Second World War.

27 December 2018

- Mostly developed in the United States of America, more specifically by the CIA.
- According to report 5U744_IRRA002_UNRE: high-level chemists have been recruited by private interest groups to develop molecules that cause all types of very specific emotional and psychic effects on Human beings.
 - These chemists have different levels of accreditation:
 - Few are perfectly aware of what they do.
 - Some are less informed and convinced to act for a noble cause.
 - Note: all of them are very well paid.
- According to report 5U744_IRRA003_UNRE: the mass production system for laboratory-developed products is particularly well built.
 - Some large infrastructures are distributed throughout the world.
 - A "redundancy" has been provided to compensate for any failure of one of these factories.
 - It keeps the system 100% operational permanently.
- According to the aeronautics investigation report 5U744_IRRA004_UNRE:
 - External workers are paid to fill the spreading systems tanks by impersonating aircraft maintenance personnel.
 - Some are not informed about what they do, others have access to more information.
 - There are several different profiles among pilots:
 - Those who are totally ignorant of what they are doing.
 - Those who have doubts but look away.
 - Those who have doubts and want to know more:
 - The extreme regularity of these sprays increases their doubts.
 - Any question asked by them systematically remains unanswered, again increasing their doubts.
 - They often do internet research to learn more and discover websites talking about Chemtrails, thus making them face their own responsibilities.
 - Those who are fully aware of what they are doing but look away.
 - Those who are perfectly aware of what they are doing and feel extremely guilty, so far as to cause cancer (this case has mainly been observed among retired pilots).
 - In order to encourage the silence of pilots, an overvaluation of their ego is associated with a substantial pay.
